INTRODUCTION

Retail Store Sales Analysis

The dataset used in this project contains 12,576 rows of retail transaction records from 1 January 2022 to 18 January 2025. It includes essential details such as:

- Transaction ID – Unique Identifier for each transaction.
- Customer ID – Unique identifier for each customer.
- Category – The category of the purchased item.
- Item – The name of the purchased item.
- Price Per Unit – The static price of a single unit of the item.
- Quantity – The quantity of the purchased item.
- Total Spent – Total spent on the item.
- Payment Method – The mode of the payment used in transaction.
- Location – The location where the transaction occurred.
- Transaction Date – The date of the transaction.
- Discount – Indicates if a discount was applied to the transaction.

This dataset serve as the foundation for analyzing sales patterns, discount trends, product and platform wise performance using power bi and excel.

OBJECTIVES

Retail Store Sales Analysis

The Objective of this project is to analyze the sales performance of a retail store using Power BI. The goal is to uncover trends in daily sales, discount patterns, and product performance to support data-driven decision making and improve store profitability.

Retail Store Sales Analysis

DATA CLEANING

1. Removed empty rows that contains no useful information and fully blank were deleted to maintain dataset quality.
2. Cleaned and rename the column "Discount Applied"
 - Rename the column from Discount Applied to Discount.
 - Converted Boolean values "TRUE / FALSE" to "Discount Applied" / "No Discount".
3. Handled missing values by filling with the required logic.
4. Retained all columns No columns were dropped as all were relevant to the analysis.
5. Converted file format Original .csv file was converted to .xlsx file

STEPS TO CREATE TIME BASED ANALYSIS

- Create a custom calendar table using DAX in power Bi.
- Added additional columns like Month and Day Name By using Dax Formula's.
- Create a many to 1 relationship between the calendar table and retail store sales data table using date column.
- Create a Total Sales measure by using Dax.

KEY INSIGHTS

- Friday recorded the highest sales (233K), while Monday was the lowest (213K). Sales Slowly Increase From Monday to Friday.
- Stable performance across 2022-2024 QTR.
- Clear downward sales trend from JAN (174K) to OCT (119K), No signs of seasonal spikes or recovery.
- Furniture category has high quality sold but relatively low revenue, likely due to low pricing or heavy discount.
- Balanced usage across all payment methods & locations (In-store, Online).

RECOMMENDATIONS

- Launch Mid-Week Offers to boost low performing days.
- Launch Special Offers on Friday as sales is peak on Friday.
- Review Past Marketing & plan Seasonal Offers to engage buyers.
- Highlight top selling categories in promotions.
- Ensure proper stock & inventory for high volume categories.
- Launch Cashback Offers & Reward on digital payments
